## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of claim 2 in the reply filed on 12/12/04 is acknowledged.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show cavity "49" (page 9) and brake "3" (page 8) as described in the specification (page 9). Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Art Unit: 3726

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference number "30" has been used to designate both gasket (page 11) and bulb (page 11); and reference number "12" has been used to designate both brake (page 9) and heel (page 10).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference characters "44" and "40" have both been used to designate "bell lip" (page 6); and reference characters "43" and "11" have both been used to designate "first wall" (page 6 and 12). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2, line 3, "the segment" lacks antecedent basis.

Claim 2, lines 6 and 7, "the locking segment" lacks antecedent basis.

7. Claim 2, line 8, "muring" is not clear. Where applicant acts as his or her own lexicographer to specifically define a term of a claim contrary to its ordinary meaning, the written description must clearly redefine the claim term and set forth the uncommon definition so as to put one reasonably skilled in the art on notice that the applicant intended to so redefine that claim term. *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999).

***Claim Rejections - 35 USC § 102***

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claim 2 is rejected, insofar as understood, under 35 U.S.C. 102(b) as being anticipated by Weber et al. (U.S. Patent 5,464,228).

Art Unit: 3726

Weber et al. discloses a method of controlling radial pressures exerted between a bell (1) and a spigot(3) in a joint comprising the steps of placing the segment within the bell, and rotating a segment against a fulcrum (50) on the interior of the bell such that a radially inward portion of the segment rotates in the axially inward direction, increasing radial forces between the bell and the spigot primarily by rotating a locking segment about a different axis than the fulcrum, and muring a portion of the segment between two surfaces (Figs. 6 and 7) of the bell, whereby, further rotation of the segment is arrested ( Figs 1,2,6-8).
